

MetalTrack – The best kept secret in the metals distribution business!

Now available as Software-as-a-Service (SaaS)

It's time to meet the Metal Monkey!

For years, **MetalTrack** metal distribution software was only available to a select few of the largest master distributors of steel in the United States. But now **MetalTrack** is open to companies of all sizes with either a standard license, or as a monthly service on the Zumasys cloud computing platform. Since 1983, **MetalTrack** has moved millions of tons of steel around the world and is now packaged for any size distributor of metal products, from carbon & stainless steel to aluminum to copper; from PVF to bar to coil; from a single location facility to companies with a hundred branches.

What sets **MetalTrack** apart from other software is its ease of use and cost effectiveness. It can utilize PC's, thin clients, Macs & iPads. **MetalTrack** offers an interactive 24-hour Internet sales and quoting system. It can scan and retrieve MTRs, and fax or email quotes and sales confirmations direct from any desk, allowing you to more effectively manage your company.

Run **MetalTrack** on the Zumasys cloud computing platform and you have an enterprise class solution without a costly upfront expense.

Spend more time running your business and less time dealing with software with MetalTrack. Contact Zumasys today at **866-ZUMASYS x228** to learn more.
