

Zumasys Document Server

Redefine printer output flexibility with Zumasys Document Server (ZDS) custom printing software for Pick systems.

WHY ZDS?

ZDS redefines printer output flexibility for your Pick systems. Now you don't have to be limited to printing your Pick output to plain or pre-printed paper using straight text. With ZDS, you can enhance the appearance of your documents with customized images and text fields. Add logos, text stamps, barcodes, signatures or form overlays anywhere on the document.

When you're done, save your documents to PDF for easy printing, emailing or faxing. ZDS gives you the ability to maintain your printer routines while enabling PDF output capabilities to give your documents an enhanced look and feel. With ZDS, you can convert your standard printed output to PDF, allowing you to store, retrieve, email, fax, and print with greater flexibility.

With ZDS, you can:

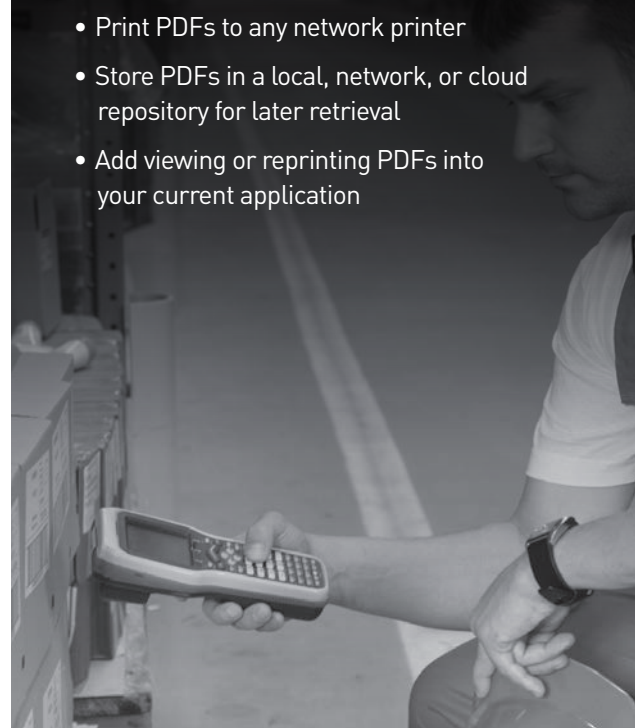

- Create and customize professionally styled documents that meet your needs
- Avoid the risk and expense of buying pre-printed forms
- Integrate PDF generation easily into your existing programs using simple subroutine calls
- Easily designate printers, signatures, faxes, logos, or emails for users or groups
- Eliminate the need to load software on user PCs or use specific terminal emulators

ZDS AT A GLANCE

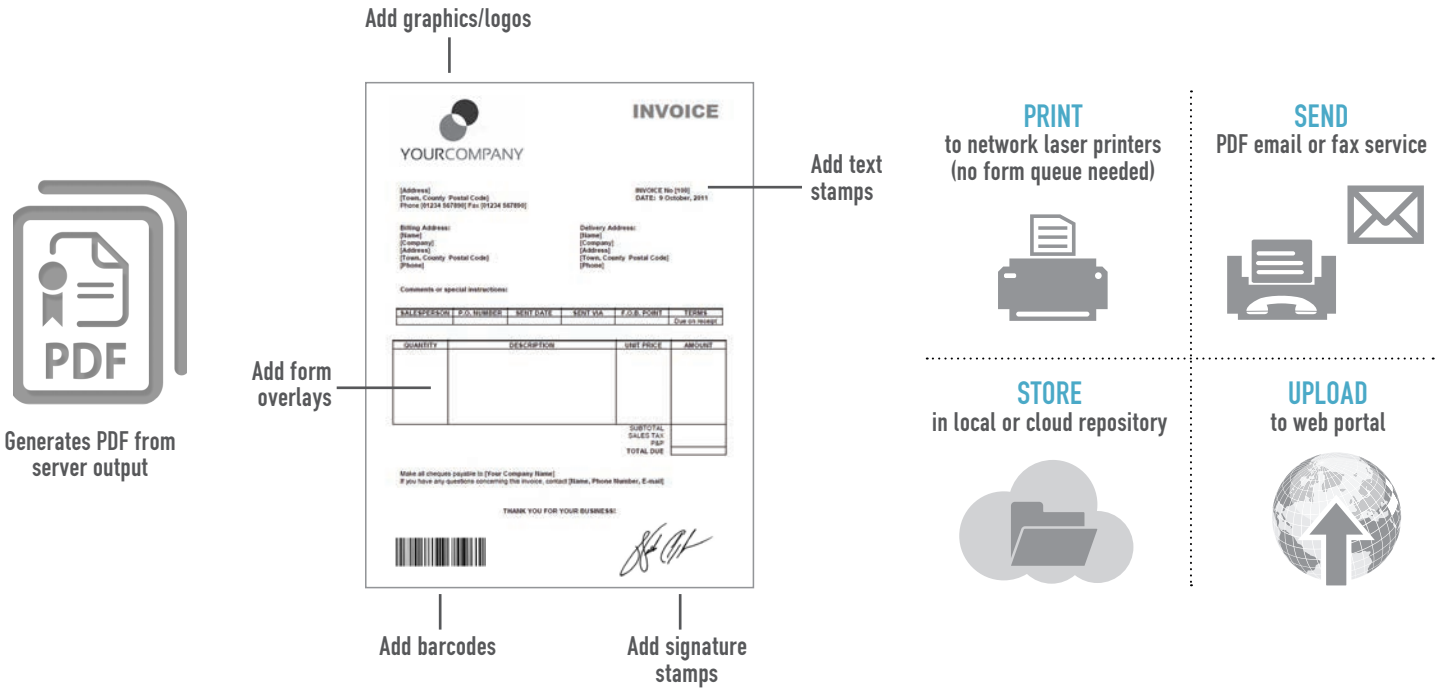

ZDS is custom printing software that gives you total control over the way you print and share output from your Pick systems.

KEY FEATURES

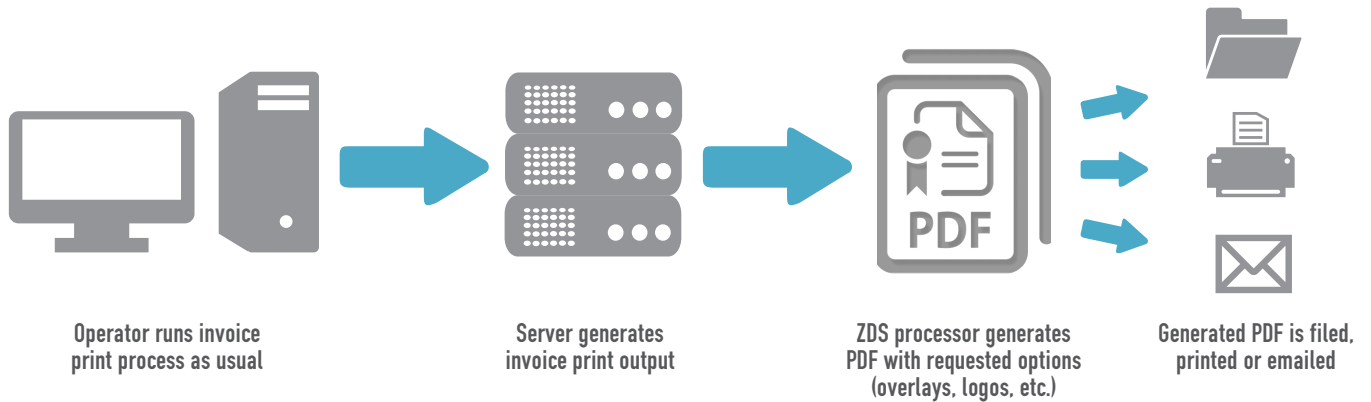

- Convert printed output to PDF
- Create images or use scanned images of your pre-printed forms for overlays
- Stamp company logos or other images anywhere onto the PDF
- Stamp text of any size or type onto the PDF
- Add signatures to final PDF
- Add barcodes
- Send the PDF as an email attachment
- Use accumulated PDFs for a web application or customer service web portal
- Print PDFs to any network printer
- Store PDFs in a local, network, or cloud repository for later retrieval
- Add viewing or reprinting PDFs into your current application
