

Browser enablement and API integration for your Pick MultiValue application

RESTful Services for D3, Universe, Unidata, jBASE and OpenQM

What is MVConnect?

With MVConnect, web developers familiar with responsive web design platforms (Angular, NodeJS and others) can now send and receive data from your Pick MultiValue application without needing to know BASIC code. MVConnect brings open-source RESTful communication services and API connectivity to every major Pick database platform, which allows you to modernize your application while avoiding vendor lock in. Using programming techniques familiar to Pick developers, you can now send and receive data between your application and any Internet-enable resource including popular Software as a Service (SaaS) platforms like PowerBI, SalesForce, Workday, AWS, Azure, Office365, GSuite, Facebook and more.

Key Benefits

- **Keep your business logic where it belongs** in your MultiValue system, and expose only what you need to third party applications.
- **Eliminate vendor lock-in** with cross platform licensing across D3, Universe, Unidata, jBASE and OpenQM – If you are on the jBASE platform, MVConnect is already included in your system for free!
- **Design applications for the future** by using open-source RESTful programming techniques.
- **Incredibly low Total Cost of Ownership** versus replacing your entire MultiValue system or writing custom code to connect to third party services.

Let us help you modernize and preserve your MultiValue investment!

Visit www.zumasys.com/mvconnect for more information

MVConnect works across all MultiValue Databases and is easy to install.

**RESTful web services is natively included in jBASE.*

Zumasys Makes It Easy

Zumasys helps organizations seamlessly integrate modern and legacy MultiValue systems and applications—easily preparing older infrastructure for the future. With MVConnect, businesses can instantly unlock API connectivity to popular applications and services, and allow integration with just about any application or service. Maintain decades of priceless business logic while embracing the technologies of tomorrow, today.

Product:	Downloadable Software & License:	Maintenance:
MV Connect	\$2,995	1st Year Included
Annual Maintenance After Year 1	Included	\$495

About Zumasys

Zumasys develops innovative software products and provides high-touch programming services for the Pick MultiValue community. Our products include jBASE and OpenQM, powerful NoSQL databases for the next generation of Pick developers; MvConnect for RESTful services; AccuTerm software for remote access to Pick applications; and MultiValue Dashboard for presenting reports and business data within a web-based graphical interface. After growing Zumasys into a \$30 million business, the company sold its cloud, infrastructure and managed services business to NexusTek in June 2018. As part of the divestiture, Paul Giobbi and the Zumasys Executive Team relocated to San Clemente, California, refocusing the company on its software technologies. Learn more at www.zumasys.com.
