# MVCONNECT

zumasys®

Browser enablement and API integration for your Pick MultiValue application

RESTful Services for D3, Universe, Unidata, jBASE and OpenQM

What is MVConnect?

With MVConnect, web developers familiar with responsive web design platforms (Angular, Node JS and others) can now send and receive data from your Pick MultiValue application without needing to know BASIC code. MVConnect brings open-source RESTful communication services and API connectivity to every major Pick database platform, which allows you to modernize your application while avoiding vendor lock in. Using programming techniques familiar to Pick developers, you can now send and receive data between your application and any Internet-enable resource including popular Software as a Service (SaaS) platforms like PowerBI, SalesForce, Workday, AWS, Azure, Office365, GSuite, Facebook and more.

MVCONNECT
RESTful Services API

Microsoft Google

salesforce workday A NETSUITE node JS

| Customers | Orders | Inventory |

| UniData | UniVerse | D3 | QM | jBASE |

Key Benefits

- **Keep your business logic where it belongs** in your MultiValue system, and expose only what you need to third party applications.

- **Eliminate vendor lock-in** with cross platform licensing across D3, Universe, Unidata, jBASE and OpenQM – If you are on the jBASE platform, MVConnect is already included in your system for free!

- **Design applications for the future** by using open-source RESTful programming techniques.

- **Incredibly low Total Cost of Ownership** versus replacing your entire MultiValue system or writing custom code to connect to third party services.

MVConnect works across all MultiValue Databases and is easy to install.

*RESTful web services is natively included in jBASE.

Zumasys Makes It Easy

Zumasys helps organizations seamlessly integrate modern and legacy MultiValue systems and applications—easily preparing older infrastructure for the future. With MVConnect, businesses can instantly unlock API connectivity to popular applications and services, and allow integration with just about any application or service. Maintain decades of priceless business logic while embracing the technologies of tomorrow, today.
